97AU-00005101. 97AU-00000422.

New serine protease(s) and kinase involved in regulating cell activity and viability - particularly the testis-specific protease HELA2 used for modulation of fertility and as tumour suppressor.

Claim 3; Page 62-64; 167pp; English.

The present sequence represents the amino acid sequence of the long isoform of HELA2. cDNA generated from HeLa cells and PA1-2 expressing HeLa cells was amplified using PCR primers AAV48312-13. Three new sequences were detected in the 480 bp amplicon. These sequences are designated HELA2 and ATC2 which have high homology to serine proteases and BCCM3 which has homology to a kinase. The proteins are involved in or associated with regulation of cell activity and/or viability. Administration of recombinant HELA2 (also called testisin) is used to increase fertility. Downregulation of HELA2 reduces fertility. HELA2 is

```
ö
              expressed in some non-testicular cancers (of colon, pancreas, prostate and ovary), so is a marker/potential therapeutic target for cancer. The promoter from the HELA2 gene is seful for testis-specific expression of other genes, e.g. for gene therapy or modulation of fertility. Drugs that block activity of HELA2 should have antitumour activity (other than in testis) while in testis are ecombinant HELA2 should stop growth of tumours and normalise sperm development (eliminating the need for orchidectomy). Identification of mutant forms of HELA2 can be used to diagnose
                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                               240

The present sequence represents the amino acid sequence of the short isoform of HELA2. CDNA generated from HeLa cells and PAI-2 expressing tells was amplified using PCR primers AAV8312-13. Three new sequences were detected in the 480 bp amplicon. These sequences are designated HELA2 and ATC2 which have high homology to serine proteases are designated HELA2 and ATC2 which have high homology to serine proteases and BCOM3 which has homology to a kinase. The proteins are involved in or associated with regulation of cell activity and/or viability. All of also as uppressor of testicular activity and/or viability. HELA2 is also a suppressor of testicular germ cell cancers (seminoma) and is also expressed in some non-testicular cancers (of colon, pancreas, prostate or over the HELA2 gene is useful for testis-specific expression of promoter from the HELA2 gene is useful for testis-specific expression of other genes, e.g. for gene therapy or modulation of fertility. Drugs that thock activity of HELA2 should have antitumour activity (other than in testis) while in testis recombinant HELA2 should stop growth of tumours and normalise sperm development (eliminating the need for orchidectomy).

Northern analysis shows expression of HUPM-3 in cardiovascular, haematopoietic and male reproductive cDNA libraries. Approximately 86% of these libraries are associated with neoplastic disorders. The invention provides 12 new human proteases, i.e. HUPM-1 to -12 (see AAX06432-43), and the polynucleotides encoding them producing HUPM polypeptides, as well as agonists and antagonists of HUPM. Methods for treating or preventing cell proliferative disorders and immune disorders using HUPM or HUPM antagonists are claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            developmental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MGARGALILALLIARAGIRKPESQEAAPLSGPCGRRVITSRIVGGEDAELGRWPWQGSLR

ANY13344-403 represent secreted and transmembrane human proteins. The CDNA sequences are obtained from CDNA libraries, prepared from fetal lung, fetal kindey, fetal brain, fetal liver and fetal retina. The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions (e.g. enterocolitis, cropinglus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous call carcinoma of the vulva and gliomas), potent effects on cell growth and queloment, diseases related to growth or survival of nerve cells including Parkinson's disease, Alzheimer's disease, Alzheimer's disease, Alzheimer's disease, Alzheimer's disease, Alzheimer's disease, PRO265 can be used as for fibromodulin, e.g. for reducing dermal scarring, PRO264 can be used as a target for anti-tunor drugs. PRO253 may be used in the treatment of Usber Syndrome or Atrophia areata; PRO269 can be used as anti-thrombotic agent; PRO287 polypeptides and portions may be used for treating problems of the kidney, uterus, endometrium, can be used for treating problems of the kidney, uterus, endometrium, blood vessels, or related tissue, e.g. in the heart of genital tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 LWDSHVCGVSLLSHRWALTAAHCFETYSDLSDFSGWNVQFGQLTSMPSFWSLQAYYTRYF 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LWDSHVCGVSLLSHRWALTAAHCFETYSDLSDPSGWMVQFGQLTSMPSFWSLQAYYTRYF 120

Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is a human protein which has at least one hydrophobic domain. This protein may be a secretory or a membrane protein. The present protein may have cytokine and cell activity, haematopoissis activity, immune stimulating or suppressing activity, haematopoissis activity, issue growth activity, haematopoissis activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, anti-inflammatory activity and tumour

The present sequence is one of sixty one novel secreted and transmembrane PRO polypeptides. The PRO polypeptides are useful for treating skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma), gastrointestinal disorders (e.g. enterocolitis), neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), wound repair, eardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischaemias such as coronary ischaemia, atherosclerosis), inflammatory disorders (e.g. asthma, rheumatoid arthritis, multiple sclerosis), inflammatory pigmentosum. The PRO nucleic acids have applications in molecular biology, including use as hybridization probes, and in chromosome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 LWDSHVCGVSLLSHRWALTAARCRETYSDLSDPSGWMVQFGQLTSMPSFWSLQAYYTRYF 120

An antiesnse oligonucleotide having a complementary sequence to the TADG-16 nucleic acid is useful for treating various cancers, including ovarian, breast, lung, colon and prostate. The TADG-16 nucleic acid, TADG-16 protein and antibodies specific to TADG-16 are useful for the diagnosis of cancer. TADG-16 protein or its fragments are useful for vaccinating an individual against TADG-16. Numerous TADG-16 peptides (AAU02225-AAU02384) are tested for their binding affinity to the 8 haplotypes HLA A0201, HLA A0205, HLA A1, HLA B27, HLA B8, HLA B2702, and HLA B4403

 diagnostic value. Espl-like enzyme modulator is useful for treating espl-like enzyme dysfunction related diseases condition such as asthma, airway allergy, chronic obstructive pulmonary disease (COPD) or osteoporosis. Esp-1 like enzyme is also useful in diagnostic assays for detecting diseases and abnormalities or susceptibility to diseases related to presence of mutations in the nucleic acid sequences which encode the enzyme. Pharmaceutical composition comprising esp-1 like enzyme is useful for treating dermatitis, Paget's disease, and preventing degradation of bone implants particularly dental implants. The present sequence is human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 17-NOV-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         18-NOV-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    24-NOV-1997
 The invention relates to human PRO polypeptides (secreted or transmembrane polypeptides) and the polymuclectides encoding them. The PRO polypeptides and polymuclectides can be used in treating pathological disorders and tumnours, in therapeutic treatment of cardiac insufficiency secretion by the pancreas, including diabetes. They can also be used in treating disorders associated with the preservation and maintenance of treating disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions, and skin diseases associated with abnormal keratinocyte differentiation (e.g., psoriases, epithelial cancers such as lung squamous cell carcinoma, epidermoid carcinoma of the vulya and gliomas).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to the isolation of novel human secreted and transmembrane proteins (PRO polypeptides), and the polynucleotide sequences are useful in sequences encoding them. The polynucleotide sequences are useful in molecular biology, as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy. The polynucleotide sequences may also be used in preparing PRO polypeptides by recombinant techniques, and in generating either transgenic animals or knock-out animals which, in turn, are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or their antibodies are useful in preparing a medicament for treating a condition responsive to the polypeptide or antibody, such as cancer, Alzheimer's disease or ischaemia, and in various diagnostic assays.

ABU71445-ABU71505 represent human PRO polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240

The invention relates to an isolated nucleic acid with at least 80% nucleic acid sequence identity to a nucleotide sequence encoding one of 8 secteted/transmembrane polypeptides, or PRO polypeptides or encoding a PRO protein extracellular domain. Also included are a vector comprising the PRO nucleic acid, a host cell comprising the vector, producing a PRO polypeptide (by culturing the host cell for the expression of the PRO polypeptide, and recovering the PRO polypeptide from the cell culture), an isolated PRO polypeptide (having at least 80% sequence identity to: (a) an amino acid sequence selected from the 61 PRO proteins; (b) an amino acid sequence encoded by a nucleic acid molecule deposited with an ATCC number (detailed in the specification); or (c) an extracellular domain of a PRO polypeptide or to a PRO polypeptide lacking its associated signal comprising a PRO polypeptide of fused to a PRO polypeptide lacking its associated signal petterologous amino acid sequence, an anti-PRO antibody, detecting a PRO245 or PRO1868 and modulating at least one biological activity of a cell expressing a PRO245
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New transmembrane polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in chromosome identification, chromosome markers, in generating probes and in tissue typing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ". transgenic animals or knock-out animals which may be used to generate either transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy, in chromosome identification, as chromosome markers, or in generating probes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and the isolated nucleic acids may be used for recombinantly expressing those markers. The PRO polypeptides and nucleic acids may also be used in tissue typing. Anti-PRO antibodies are useful in diagnostic assays for PRO, and in affinity purification of PRO from recombinant cell culture or natural

```
The invention describes a new isolated nucleic acid molecule comprising
the full length coding sequence of the DNA deposited with the American
CC Type Culture Collection (e.g. ATCC Deposit No. 20928B), or a sequence
with at least 80% identity to a DNA encoding a PRO polypeptide comprising
any of 61 sequences having 164-1119 amino acids fully defined in the
specification. The PRO polypeptides or polymuclectides are useful as
pharmaceuticals, diagnostics, biosensors or bioreactors. These are
particularly useful for detecting or treating e.g. Parkinson's disease,
Alzheimer's disease, inflammations, nephritis, wound healing, nerve
cc particularly useful for detecting or treating e.g. colorectal
cancer), haemorrhage (or reduce risk for hemorrhage), rheumatoid
arthritis, diabetes, cirrhosis of the liver, fibrosis of the lungs,
csetenosis, dermal fibrotic conditions (e.g. keloids or scarring),
ischaemia, strokes, hypertension, heart attacks, atherosclerosis, or
infertility in mammals (e.g. humans, dogs, cats, cattle, horses, sheep,
pigs, goats, or rabbits) The PRO polypeptides are useful as targets for
infertility in mammals (e.g. humans, dogs, cats, cattle, horses, sheep,
pigs, goats, or rabbits) The PRO polypeptides are useful as targets for
infertility in mammals (e.g. humans, dogs, cats, cattle, horses, sheep,
pigs, goats, or rabbits) The PRO polypeptides are useful as targets for
infertility and markers, or for chromosome identification. The PRO
cc genes are useful as hybridisation probes, or for screening libraries of
human cDNA, genomic DNA or mNAA. The PRO genes may also be used in gene
therapy, particularly for replacing a defective gene This is the amino
claid sequence of a novel human secreted and transmembrane PRO polypeptide
                                                                                                                                                                                                                                                                                                                                                                             New genes and secreted and transmembrane polypeptides (e.g. PRO245 or PRO335), useful for treating or diagnosing e.g. Alzheimer's disease, cancers, hemorrhage, rheumatoid arthritis, diabetes, cirrhosis, ischemia
                                                                                                                                                  Ferrara N;

ö New PRO polypeptides and nucleic acid molecules, useful in diagnosing or treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, cancer, AIDS, Alzheimer's disease or Parkinson's disease

Claim 12; Fig 92; 473pp; English

The invention relates to an isolated PRO polypeptide having at least 80% amino acid sequence identity to: (a) any one of 61 fully defined amino acid sequence given in the specification (appearing as ABUS4407).

ABUS4407); (b) an amino acid sequence encoded by the nucleotide sequence deposited under American Type Culture Collection (accession numbers is acksociated signal peptide; (d) an extracellular domain of the PRO sequences which lacks its associated signal peptide; (d) an extracellular domain of the PRO polypeptide with its associated signal peptide; or (e) an extracellular domain of the PRO polypeptide which lacks its associated signal peptides. Also include are the nucleic acids encoding the PRO polypeptides and nucleic acids are useful in diagnosing or treating of polypeptides and nucleic acids are useful in diagnosing or treating anterocolitis, gastrointestinal ulceration, skin diseases associated with abnormal keratinocyte differentiation, e.g. psoriasis or epithelial cancers such as squamous cell carcinoma, Alzhaimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, inflammatory diseases, e.g.

```
cc rheumatoid arthritis, asthma or multiple sclerosis, organ failure, atherosals, cardiac injury, infertility, birth defects, premature aging, AIDS, cancer, diabetic complications, or mutations in general. The cajing, AIDS, cancer, diabetic complications, or mutations in general. The polypeptides are also useful for wound repair and associated therapies concerned with re-growth of tissue. The nucleotide sequences may be used as hybridisation probes in chromosome and gene mapping, or in generating antisense RNA and DNA. PRO nucleic acids are also useful in preparing PRO polypeptides, in assays to identify other proteins or molecules involved in binding reaction, to generate transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents, for chromosome identification, and tissue typing. The PRO polypeptides and nucleic acid molecules are also useful in gene therapy, and as molecular weight markers for protein cleatrophoresis purposes. The anti-PRO antibodies may be used in diagnostic assays for PRO, or for the affinity purification of PRO from recombinant cell culture or natural sources. The present sequence

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCWNSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
full-length cDNA clone CSODK002YM07 of HeLa cells Cot 25-normalized of Homo sapiens (human).
